# THE YARN INSPECTION SYSTEM

## Basic Installation

1. Test Unit
   - Sensor CS, Evenness unit
   - Sensor FM, Foreign fiber unit
   - Sensor Humidity/temperature (integrated)

1a. Changer/Yarn Feeder (only for UT5-S800/A)

2. Operating Unit
   - Single-package creel (only for UT5-S800/SA)

## Options

3. Sensor MS120 integrated as well as external

4. Additional measuring units
   - Sensor OH, Hairiness measuring unit
   - Sensor OI, Impurity measuring unit
   - Sensor OM, Multifunctional measuring unit

5. Sensor FSA, Count Manual

6. Sensor FA, Count Automatic
   - KB-System SPG (no illustr.)

## Special Accessories

7. Packages Carrier 24/40

8. Unwinding Device, manual

9. Unwinding Device with drive

---

**USTER® TESTER 5-S800**
### Basic Installation

**Overall Installation**

**Functions:**
- Capacitive measurement of mass variations and imperfections in yarn, roving and sliver of staple fibers
- Measurement of foreign-matters
- Collection, evaluation and storage of measurement values
- Automatic check of all measured values, diagrams and spectrograms
- Yarn classification based on the USTER® STATISTICS
- Editor for customizing report layouts
- Filter functions for quick data retrieval and for the preparation of long-term reports
- Simulation of yarn boards, woven and knitted fabrics
- QualiProfile, graphic presentation of the overall quality

**Version:**
- USTER® TESTER 5-S800/A (automatic version)
- USTER® TESTER 5-S800/SA (semiautomatic version)

**Included in the delivery:**
- Test unit
- Operating unit (Control unit, screen, keyboard and mouse, backup unit)
- System printer
- Single-package carrier (only for the semiautomatic version)
- Application software
- Table set

### TEST UNIT (1)

**Subsystems of the USTER® TESTER 5-S800 basic version:**

**Sensor CS:**
- Capacitive measurement of mass variations and imperfections in yarn, roving and sliver of staple fibers
- Measurement range: approx. 1 tex to 12 ktex (limitations according to the type of fiber are possible)

**Sensor FM:**
- Determination of the number of foreign-matter of staple fiber yarns in the count range of 100 tex to 4 tex in absolute or relative values (1 km, 10 km, 100 km)
- Min. test length 1000 m

**Sensor Humidity and temperature:**
- Integrated sensor for measurement of humidity and temperature in the environment of the Test unit
  - Humidity: +/- 3% rH at a temperature of 21°C
  - Temperature: +/- 0.3°C at a temperature of 20°C

**Conveyor S:**
- Material conveying system for yarn, roving and sliver
- Testing speed: 25 to 800 m/min

**BASE S:**
- Absorber for the removal of the tested yarn

**Dust suction:**
- Dust suction for all optical sensors can be individual switched on

**Keypad:**
- Control keys for easy operation
- Display of active sensors and actual speed
### Changer/ Yarn Feeder (1a)

**Function:** Automatic transfer of the yarn from the package changer and insertion into the measuring slot (max. 24 positions).

### Operating Unit (2)

**Computer software:** The USTER® TESTER 5-S800 is a menu driven design that allows quick access and selection of testing, setup, calibration and data management. These features include:
- Windows operating system with icon-based software
- Simple user interface
- Error messages for troubleshooting
- Network capabilities

**Computer hardware:**
- Industrial computer system with dual core 2.5 GHz processor and 4GB RAM
- DVD-R drive
- 2 hard drive, 250 GB or better

**Computer accessories:**
- 19” High resolution flat panel LCD monitor with Integrated sound bar
- Laser printer
- Keyboard
- Optical mouse
## Options

<table>
<thead>
<tr>
<th>Sensor MS120 (3)</th>
<th>Application range:</th>
<th>Additional measuring unit for measuring heavy sliver, wool tops and converter tops in the range of approx. 12 to 80 ktex (limitations according to the type of fiber are possible).</th>
</tr>
</thead>
</table>

### Additional measuring units (4)

**Optical measuring units**

<table>
<thead>
<tr>
<th>Sensor OH, Hairiness Measuring Unit (4)</th>
<th>Application range:</th>
<th>Determination of the hairiness of staple fiber yarn in the range of approx. 5 to approx. 1000 tex (limitations according to the type of fiber are possible).</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Sensor OL, Impurity Measuring Unit (4)</th>
<th>Application range:</th>
<th>Determination of trash and dust of staple fiber yarn in the range of approx. 5 to approx. 200 tex (limitations according to the type and color of yarn are possible).</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Sensor OM, Multifunctional Measuring Unit (4)</th>
<th>Application range:</th>
<th>Determination of the shape and variation of the cross-section of staple fiber yarn in the range of approx. 5 to approx. 200 tex (limitations according to the type of yarn are possible).</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Sensor FSA, Count Manual (5)</th>
<th>Application range:</th>
<th>Manual determination of the absolute count of yarn, roving and sliver of staple fibers in the count range of 1 tex to 50 ktex.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Sensor FA, Count Automatic (6)</th>
<th>Application range:</th>
<th>Automatic determination of the absolute yarn count and semiautomatic determination for roving and sliver of staple fibers in the count range of 1 tex to 50 ktex.</th>
</tr>
</thead>
</table>
Connection to LAB EXPERT

**Function:**
Connection set to connect the USTER® TESTER 5 to the USTER® LAB EXPERT

KBS, Knowledge Based System

**Function:**
Knowledge-based software module for detecting the cause of periodic faults in the spectrogram:
- The parts of the respective production machine which may be defective are marked in the graphic representation
- The gearing layouts of the most important production machines are stored
- Software-supported configuration of the gearing layouts and the knowledge base

Special Accessories

### Packages carrier 24/40 (7)

**Application:**
Packages carrier for creeling and transporting up to 40 bobbins

**Package dimensions:**
- With 24 packages: Ø max. 125 mm; length max. 450 mm
- With 40 packages: Ø max. 60 mm; length max. 450 mm

### Unwinding Device, manual (8)

**Application range:**
Unwinding of roving and rubbings

**Take-up speed:**
- Max. 50 m/min, according to the symmetry of the package
- Manual adjustment of tension

**Package dimensions:**
Ø max. 600 mm; inside Ø min. 20 mm; length max. 500 mm

### Unwinding Device with drive (9)

**Application range:**
- Unwinding of roving, rubbings and sliver
- Possibility of automatic length determination and manual cutting device for gravimetric count determination of roving and sliver

**Take-up speeds:**
25, 50, 100 or 200 m/min

**Package dimensions:**
Roving bobbin Ø min. 50 mm; length max. 580 mm; weight max. 10 kg
## THE YARN INSPECTION SYSTEM

### Application Software

#### Reports

<table>
<thead>
<tr>
<th>Type of reports:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Test reports of measurement series</td>
</tr>
<tr>
<td>- USTER® Quality Report (summary of the key data and the test results on one page; quality certificate)</td>
</tr>
<tr>
<td>- QUALIPROFILE® (graphic presentation of the overall yarn quality, with respect to the USTER® STATISTICS or to a customer-specific yarn profile)</td>
</tr>
<tr>
<td>- Long-term reports</td>
</tr>
<tr>
<td>- Pre-configured standard reports for different applications</td>
</tr>
<tr>
<td>- Customized reports</td>
</tr>
</tbody>
</table>

#### Display and print-out of the reports:

| - Automatic reports |
| - Exception reports |
| - As required |

#### Limit values:

| - Determination of fixed limits or definition of limits based on the USTER® STATISTICS stored in the system |
| - Verification of measured values |
| - Measured values which exceed the set limits will be marked |

#### Numerical Output of Results (SENSOR CS)

<table>
<thead>
<tr>
<th>Unevenness U:</th>
<th>Determination of the mass unevenness by help of the irregularity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coefficient of variation CV:</td>
<td>Determination of the mass unevenness by help of the coefficient of variation</td>
</tr>
<tr>
<td>Coefficient of variation CV(L):</td>
<td>Determination of the unevenness for cut lengths of 1, 3, 10, 50 or 100 m</td>
</tr>
<tr>
<td>Deviation rate DR%:</td>
<td>4 channels with separately selectable ranges and integration lengths: DR, DR+, DR−, DRt</td>
</tr>
</tbody>
</table>
| Maximum mass variation: | • m (max) = maximum mass increase  
| | • m (min) = maximum mass reduction  
| | • Possible cut lengths for the calculation: 1, 3, 10, 50 or 100 m |
| Index I of irregularity: | Relationship between the ideal and the actually measured unevenness of staple fiber material |
| Imperfections: | Counting of thin places, thick places and neps with selectable sensitivity limits:  
| | • Thin places: −30%; −40%; −50%; −60%  
| | • Thick places: +35%; +50%; +70%; +100%  
| | • Neps: +140%; +200%; +280%; +400% |
| Relative count: | Percentage count variation of the test material between single tests in a sample, with reference to a selectable material length |
The Yarn Inspection System

Numerical Output of Results (SENSOR FM)

- **FM:**
  - FD: Foreign-matter dark
  - Number of foreign-matter in absolute or relative value (1 km, 10 km or 100 km) according foreign-matter matrix in a table
  - Results can be summed up for long-term monitoring

Numerical Output of Results (SENSOR OH)

- **Hairiness H:** Determination of the hairiness
- **Standard deviation sh:** Standard deviation of hairiness
- **Standard deviation sh(L):** Standard deviation of hairiness for cut lengths of 1, 3, 10, 50 or 100 m
- **Maximum hairiness deviation:**
  - h (max) = maximum hairiness increase
  - h (min) = maximum hairiness reduction
  - Possible cut lengths for the calculation: 1, 3, 10 m

Numerical Output of Results (SENSOR OI)

- **Trash and dust particles:**
  - Determination of the number of trash and dust particles
  - Classification of the trash and dust particles

Numerical Output of Results (SENSOR OM)

- **Diameter ø:** Determination of the mean diameter over the test length
- **Coefficient of variation CV2D:** Determination of the cross-sectional variation
- **Shape:** Determination of the roundness of the yarn body
- **Density D:** Calculation of the yarn density

Numerical Output of Results (Count Measuring System)

- **Absolute count:** Determination of the length-related mass value
**STATISTICS**

*Statistical values:* Overall result protocol with statistical data of the result columns.

- Mean value
- Median
- Standard deviation $s$
- Coefficient of variation CV
- 95% confidence range
- USP™ (USTER® STATISTICS Percentile)
- Min. value
- Max. value

**USTER® STATISTICS:**

- Material-dependent USTER® STATISTICS are stored in the database.
- Application:
  - for the comparison of measured values with the USTER® STATISTICS
  - setting of limit values based on the USTER® STATISTICS.

---

**Diagram:**

- Sensitivity selectable in the ranges of ±5% to +500/–100% (1)
- Longitudinal scale in the ranges of 1 to 10000 m per line (1, 2, 4)
- Cut lengths: normal, 0.1, 0.3, 1, 3, 10, 30, 100 m (1, 2, 4) / 0.3 and 8 mm (4)
- Positions of imperfections marked in the mass diagram (1)
- Possibility of representing 3D diagrams (1, 2, 4)

**Spectrogram:**

- Wavelength range up to 1/5 of the measured test length, but to a maximum of 1100 m (1, 2, 4)
- Max. 160 channels (compared to the USTER® TESTER 3, the resolution has been doubled) (1, 2, 4)
- Possibility of representing 3D spectrograms (1, 2, 4)

**Variance-length curve:**

- Cut lengths from 2 cm to 600 m, whereby the maximum calculated cut length is about 1/15 of the measured test length (compared to the USTER® TESTER 3, the resolution has been doubled) (1, 2, 4)
- Possibility of representing 3D variance-length curves (5, 2, 4)

**Frequency distribution diagram:**

Representation of the parameter variations within single tests (1, 2, 2, 3)

**Quantile diagram:**

Representation of the mass variation in 4 traces with 4 different integration lengths (1)
<table>
<thead>
<tr>
<th>Graphic output of results: (SENSOR FM)</th>
<th>Classification:</th>

General

**General ambient conditions**

*Room climate:* The ambient conditions must be maintained in order to avoid any influencing on the test material according to ISO 139.1973 or DIN 53 802.

- **Humidity:** 65±2% relative humidity.
- **Temperature:** according to ISO 139.1973 or DIN 53 802
  - 20±2 °C for temperate climates
  - 27±2 °C for tropical climates

**Installation data**

*Electrical connections:* Single phase mains with protective conductor.

**Mains voltage range:**

<table>
<thead>
<tr>
<th>Voltage selector</th>
<th>Nominal voltage (-10/+6%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>105 V</td>
<td>100–110 V</td>
</tr>
<tr>
<td>125 V</td>
<td>115–127 V</td>
</tr>
<tr>
<td>145 V</td>
<td>130–150 V *</td>
</tr>
<tr>
<td>210 V</td>
<td>200–215 V</td>
</tr>
<tr>
<td>230 V</td>
<td>220–230 V</td>
</tr>
<tr>
<td>250 V</td>
<td>240–250 V</td>
</tr>
</tbody>
</table>

*) Caution: 150 V only +3% tolerance

*Mains frequency:* 48 – 62 Hz

*Power consumption:* Max. 1000 VA

*Compressed air connection:*

- Air quality: according to ISO 8573.1, class 3
- Min. pressure at inlet of air filter regulator: 6 bar
- Max. pressure at inlet of air filter regulator: 7 bar
- Requirement compressed air: Standard
  - S800 Automatic: 12 m³/h
  - S800 with Module FA: 18 m³/h
  - S800 Semiautomatic: 9 m³/h
- Min. internal diameter of the connection: 8 mm
- Max. length of the connection: 5 m
- Max. temperature difference between compressed and laboratory air: 10 °C

Compressed air connection for additional tester will be doubled. For detail please refer to the above mentioned information.
**THE YARN INSPECTION SYSTEM**

### Gross weight of the basic installation

<table>
<thead>
<tr>
<th>Semi-automatic version:</th>
<th>Approx. 100 kg</th>
</tr>
</thead>
<tbody>
<tr>
<td>Automatic version:</td>
<td>Approx. 100 kg</td>
</tr>
</tbody>
</table>

**Lab equipment:**

- Main table and waste box: Approx. 130 kg
- Tester table: Approx. 35 kg
- Floor loading capability: ≥ 300 kg/m²
- Noise level: 65-74 dB (A) depending on yarn and absorber pressure, at distance of 1 m (environmental noise approx. 50 dB).

### Space required for the installation of the USTER® TESTER 5-S800

- At a vibration-free location
- Manual or automatic count measurement systems must be set up on a separate table
Subject to technical modifications

Uster Technologies has made all reasonable efforts to ensure that all information is accurate at the time of publication. Hereby it is declared that alterations to the product may be possible at any time. In these cases the information contained in this technical datasheet is subject to change without notice.
